

Online catalogue management system,
designed specifically for the Automotive Aftermarket.

Key Benefits

- Control and manage your data with greater efficiency and independently, unlike partisan solution providers
- Access the Global Automotive Aftermarket from one source
- Export to multiple aftermarket data standards at the touch of a button
- Ensure your published data is accurate and up-to-date
- Utilise and output data for marketing collateral, web and print purposes
- Access from multiple locations anywhere in the world 24/7
- Control and share information between organisations, brands or supply-chain

Xchecker™ is the command centre for all your catalogue data management needs and the foundation stone of ONCE®. It's the central hub that allows you to process and maintain your data, without duplication or repetition.

Xchecker™ transforms and delivers high quality catalogue data compatible to multiple aftermarket data standards.

With Xchecker you are in complete control of your data. Our unique system provides you with the freedom and ease to distribute your data to multiple aftermarket data standards, such as TecDoc, ACES and Autocat v8, providing access to the global automotive aftermarket, and output to other marketing channels, including web and print.

Key Functionality

Merge vehicle data
with parts information
to create applications

Output your data for
cataloguing or supply to
data houses

Create and edit
information on your
product range

View and edit from a suite
of reports to help you
manage, edit and enhance
your data

Publish to these leading aftermarket
data standards from one data source.

Unparalleled Cataloguing Features

- Manage component data for all products in one location
- Catalogue Maintenance features provide total control of both part and application visibility
- Assign multiple photographic images and PDF files to one part number
- Configure and control data exported to industry indexes

Labour Saving Features

- **Parent>Child:** Manage a flagship brand which in-turn manages sub-brands automatically
- **Ghosting:** intelligently match and update data from your master source to different aftermarket standards
- **Cascade:** Create a category hierarchy, then flow updated content down through applications at the touch of a button
- **Leader>Follower:** Connect Xchecker databases and manage them as one
- **Bulk Export/Import and Editing facilities:** Download sections of your data to an excel file for easy manipulation, then import straight back in

Exceptional Reporting Features

- Maintain and view **Cross References** by OEM's, Suppliers, Competitors and Customers
- Detailed **Gap Analysis** reports can be run on **Products, Vehicles, Cross References** and **Images**, to help you maintain accuracy. You can even search the lifetime of a vehicle to ensure associated parts coverage is accurate
- Run **Error Reports** with hyperlinks to faults so you can evaluate, check and amend quickly and efficiently
- The **Advanced Reporting** suite can also be customised to regenerate or run preferred reports, and create an archive

Plus

Compliant to TecDoc, MAM Autocat V8 and ACES standards

Data quality checks run automatically every night

System can be configured and customised to meet your needs

Store confidential business data securely

Robust recovery protocols, enabling data to be restored to last save point, and nightly back-ups provided as standard

Easy to adopt and use, the system is intuitive and process driven, structured to help you manage daily tasks with ease
